

POTATO GROWING CYCLE

15 - 30 days
sprouting begins and
shoots emerge after
planting

Tubers begin
forming
after 15 - 30
days after
emergence

Tubers begin filling out 45 -90 days after emergence.
Plant grows flowers during this stage
(white, purple, or pink)

Maturity is reached 90-120 days after emergence. Potatoes are
ready to harvest.

It takes between 90 - 120 days for a potato seed to grow into a mature potato
plant full of potatoes to dig up and harvest

A potato plant needs a lot of heat and sunshine, water and fertilizer to grow
