

Gary Secor is a Professor of Plant Pathology at North Dakota State University. Secor is a native of Bozeman, MT and has a BS and MS degree from Montana State University, and a PhD from the University of California at Davis. He began his potato career in Montana as director of the first potato virus testing lab in the US, and has worked with numerous other potato diseases during his 43 year career at NDSU, concentrating on disease discovery, diagnosis, management and grower education. He works closely with the potato breeding program at NDSU and has been interim potato breeder. He teaches classes, has graduate students, enjoys lake time and international travel and work, and is the recipient of numerous honors. He will talk about closing the gap to managing potato disease in storage and how to grow seed potatoes that your customers want.
