

THE POTATO MINUTE

Potato Growers of Alberta

2026

www.albertapotatoes.ca

EXECUTIVE DIRECTOR – Terence Hochstein

While the June rains were a welcome occurrence across much of the province, there were areas in our seed growing region that had growers saying, “enough already”. The Edmonton area had one of its wettest Junes on record and in some areas it continued right on into July. With all of the heat and high humidity around, the next worry for many growers was the risk of hail. We have had a number of storms roll through southern Alberta and leave a path of destruction in their wake.

In This Issue:

- 1-2 Executive Director's Report
- 3-5 Seed, Gov't-Policy Report
- 6-7 Ag Relations Report
- 8 Provincial News
- 9 Across the Country
- 10-14 From the Office

No farmer ever grows for crop insurance, but when disaster strikes, we are all thankful that we do have some coverage to help offset our costs. If a storm comes early enough, most times the crop has a chance to somewhat recover, but it is never the same. Lower yields, low gravity, small tubers etc. are now what a grower has to deal with if the crop recovers. Nothing is more disheartening than looking at a lush, green crop in the morning and the next morning having nothing left but sticks.

When this happens, I have had more than one grower say, “we will get the next one, we’ll just tuck and roll on this one.” In this business, the first ingredient that is required is optimism. Without an optimistic view everything becomes a battle.

As the industry continues to expand in Alberta so do the acres. For the first time ever the Alberta growers planted over 86,000 acres. Continued growth in the processing sector (fry and chip) remains the driver behind this growth. Overall though the total Canadian acres will be down about 1% this upcoming year. The US acres are projected to be off about 3% as well. Global overproduction has led to market uncertainty and realignment.

Early July presented the PGA with the opportunity to host a couple of groups out of the American mid-west and the Idaho Farm Bureau. Further details of these events are on page 4 in Stacey's article.

July 8th brought another very successful APIA Burgers and Beans Family BBQ. Over 330 people enjoyed the evening with the highlight this year being the "APIA Tater Tot" tent for the young ones. Games, Lego, bubbles and drawing were a few of the attractions to go along with the face painting and snow cones. There are very few places in this industry where the entire family can get together with other growers, industry partners and suppliers for a fun evening of good food, conversation and a few laughs. Demographically it was very interesting to see that most of the group is under age 45, with many of them being under age 12. For those of us in the balance of the crowd, we get to sit back and watch the next generation step up. If you fall into this category, you should not be able to wipe the smile off your face.

The following day, the PGA held its annual golf tournament at the Taber Golf Club. As this year is our 60th anniversary, we decided to have a bit of fun and celebrate, with teams being asked to dress up in 60s attire. A few teams showed up dressed for the occasion, leading to numerous laughs and a few great pictures. Once again the day wrapped up with a delicious prime rib supper enjoyed by all in attendance.

The winners of 'Best Dressed Male Team' during Golf Tournament

The day after the golf tournament I had the opportunity to travel to PEI with a number of the Negotiating Committee and their spouses for the summer PMANA meetings and tour. Lots of information and conversation around where the industry is at in North America and what the next couple of years may look like. It's always interesting to see other growing areas in North America and have the opportunity to visit with growers in their own backyard.

Each July also brings the annual PSA Summer Symposium. Although I was unable to attend this year, the event was held at the Food and Farm Exploration Center in beautiful Plover, Wisconsin. The July 15-17 event was a huge success with over 100 people in attendance. Stay tuned for next year's dates and location.

A graphic with a green border and a circular logo in the top right corner that says "POTATO SUSTAINABILITY ALLIANCE MEMBER". The text inside the graphic reads: "Our growers have been following the sustainability path for years. The Potato Growers of Alberta were one of the original members of PSA. Through PSA's program, **our growers have another avenue to tell their sustainability success stories.**" Below the text is a small circular photo of Terence Hochstein, with his name and title "Terence Hochstein, Executive Director, Potato Growers of Alberta" next to it. The graphic is framed by large quotation marks on the left and right sides.

As we move through August, growers are starting to plan on harvest and having everything in order to go. With the long position in the processing sector this year, it appears that our CY25 crop will run right to the end of August and maybe into the first week of September. This puts a lot of pressure on growers that have field run contracts but somehow they always seem to manage through the situations. September is right around the corner and kids will be heading back to school. Plans are well underway for our 60th anniversary celebrations at the Alberta Potato Conference and Tradeshow November 23-25th in Red Deer. More details will be available in the coming months.

Until next time,

terence@albertapotatoes.ca

DIRECTOR OF GOVERNMENT RELATIONS, POLICY & SEED Stacey Bajema

Building a Competitive Future

The 2026 seed potato crop continues to show considerable variability across Alberta, with growing conditions differing significantly by region. While some seed acres have experienced hail damage, many growers in Southern Alberta are anticipating an average crop where storms have been avoided. The Lacombe region is looking decent this season, providing some relief after several years of dry conditions that challenged seed production. In contrast, growers in the Edmonton area continue to contend with relentless rainfall and frequent storms, with some reporting more than double their average annual precipitation.

Excess moisture is creating challenges for crop management and increasing concerns as the season progresses.

As harvest approaches, the overall outlook remains mixed. Crop quality and yield will ultimately depend on weather conditions over the coming weeks, but Alberta seed growers continue to demonstrate their resilience in managing another season of highly variable growing conditions.

Government Relations Update

Building a Competitive Future for Alberta Potatoes

Summer is always a busy season for advocacy at the Potato Growers of Alberta. This year, our efforts have focused on two key priorities that will shape the future of the industry: Canada's Next Policy Framework for agriculture and ongoing discussions surrounding the Canada-United States-Mexico Agreement (CUSMA).

Preparing for the Next Policy Framework

As governments begin developing the next agricultural policy framework, the Potato Growers of Alberta has emphasized the need to strengthen the resilience and competitiveness of Canada's potato industry.

Over the past five years, the global potato marketplace has become increasingly competitive, with new exporting countries entering markets that have traditionally been served by Canadian producers. To remain competitive, Canada's policy environment must encourage innovation, improve productivity, and reduce unnecessary regulatory burden while supporting investment across the value chain.

Closer to home, policies must continue to foster a stable business environment that enables family farms to grow, invest, and pass their operations on to future generations. Strong rural communities depend on a vibrant and competitive agricultural sector.

Supporting North American Trade Through CUSMA

Alberta's potato industry has long benefited from strong relationships with our American counterparts. As part of the Pacific Northwest potato-producing region, Alberta and neighbouring U.S. states have developed an integrated and collaborative supply chain that benefits growers, processors, and consumers on both sides of the border.

Alberta's seed potato industry provides the foundation for commercial potato production across North America while also improving the efficiency of cross-border supply chains. Seed potatoes provide valuable return loads for trucks delivering fresh produce and other agricultural goods into Canada, reducing transportation costs and supporting an integrated, competitive North American potato industry.

Cross-border trade is also essential for Alberta's fresh and processing sectors. Albertans consume more fresh potatoes than are grown within the province, making reliable access to potatoes from neighbouring provinces and states an important part of our food supply. Likewise, many processing facilities depend on potatoes moving efficiently across borders to maintain year-round operations. Agricultural machinery, crop inputs, and other essential goods also move freely throughout the integrated North American supply chain.

The CUSMA agreement has played a critical role in supporting this integrated marketplace. As discussions continue, the Potato Growers of Alberta will continue advocating for policies that strengthen cross-border trade, preserve efficient supply chains, and enhance the competitiveness of the North American potato industry on the global stage.

The Potato Growers of Alberta extends its appreciation to the Government of Alberta's international trade offices and Global Affairs Canada for their continued leadership in facilitating constructive dialogue and strengthening relationships with our North American trade partners.

DIRECTOR OF GOVERNMENT RELATIONS, POLICY & SEED Stacey Bajema

International Year of the Woman Farmer

On June 23, PGA Board Chair Alison Davie and Government Relations, Policy and Seed Director Stacey Bajema joined Alberta's Minister of Agriculture and Irrigation, Tara Sawyer, to celebrate the International Year of the Woman Farmer at Smithbilt Hats in Calgary. The event recognized the contributions of women in agriculture and provided an excellent opportunity to connect with female leaders from across Alberta's agri-food sector.

Minister of Agriculture and Irrigation Tara Sawyer

Next Policy Framework Roundtable

PGA participated in the Next Policy Framework roundtable on June 25, hosted by Minister Heath MacDonald at NAIT in Edmonton. The discussion brought together Alberta commodity organizations to help shape priorities ahead of the Federal-Provincial-Territorial Agriculture Ministers' meetings in Halifax.

Next Policy Framework Roundtable participants

Kentucky Farm Bureau Leadership Tour

On Canada Day, the Kentucky Farm Bureau LEAD Program visited Sandhills Seed Potatoes to learn about Alberta's seed potato industry. The stop provided an opportunity to showcase potato production while strengthening relationships with the next generation of agricultural leaders.

Kentucky Farm Bureau Leadership Team at the Sandhill Seed Potatoes farm

Team Alberta Crops Roundtable

Minister Heath MacDonald met with Team Alberta Crops on July 6 at Jeff Frost's farm near Didsbury to discuss issues impacting Alberta's crop sector. PGA Board Chair Alison Davie represented Alberta potato growers, highlighting key priorities facing the industry.

Minister Heath MacDonald and Team Alberta Crops leaders

Minister Visit to Perry Farms

During a July 7 visit to Perry Farms in Southern Alberta, Minister Heath MacDonald met with the Perry family to learn more about their multi-generational farming operation and the importance of Alberta's potato industry.

Minister Heath MacDonald during the visit at The Perry Farm

Potatoes in the Park

The Potato Growers of Alberta proudly hosted the second annual Potatoes in the Park reception on July 6 in partnership with the Government of Alberta's U.S. Trade Offices. The event welcomed U.S. legislators, government officials, and industry leaders during Stampede week, showcasing Alberta's potato industry and strengthening important cross-border relationships.

DIRECTOR OF GOVERNMENT RELATIONS, POLICY & SEED Stacey Bajema

Potatoes in the Park was a great opportunity to share the passion for food and agriculture with US legislators, business leaders and the ASEAN diplomatic delegation.

Idaho Farm Bureau Roundtable

On July 7, the Potato Growers of Alberta welcomed Idaho Lieutenant Governor Scott Bedke, Director Tewalt, and members of the Idaho Farm Bureau to Perry Farms for a farm tour and roundtable discussion with Alberta potato growers. The visit reinforced the strong partnership between Alberta and Idaho while highlighting the value of continued collaboration across the Pacific Northwest's agriculture industry.

US Delegation looking at a potato pile while visiting Southern Alberta farmers

NDP Agriculture Roundtable

PGA Board Member Matthew Visser represented Alberta potato growers at the NDP Agriculture Roundtable on July 7 with Opposition Leader Naheed Nenshi and MLA Heather Sweet. Discussions focused on business risk management programs, crop insurance, irrigation infrastructure, and other priorities for Alberta producers.

MLA for Edmonton-Manning, Shadow
Minister for Agriculture and Irrigation

Naheed Nenshi,
MLA for Edmonton-Starthcona

Pacific NorthWest Economic Region (PNWER) Summit

From July 19–23, the Potato Growers of Alberta was proud to sponsor the Pacific NorthWest Economic Region (PNWER) Annual Summit in Edmonton. The conference brought together legislators, government officials, and industry leaders to advance regional collaboration on transportation, water management, trade, and economic development-issues that are critical to the long-term success of Alberta's potato industry.

Agriculture Leaders Roundtable: Lindsay Eng from Oregon, Michael Honeycutt from Montana, Minister David Marit from Saskatchewan, Derek Sandison from Washington & Minister Tara Sawyer from Alberta

AG RELATIONS DIRECTOR – Ashley Wagenaar

Field Days South of the Border: What Washington State and Oregon State Are Teaching Us

This summer I had the opportunity to travel south of the border to attend two of the Pacific Northwest's premier potato research events: the Washington State University (WSU) Commercial Seed Lot Trial and Potato Field Day at the Othello Research Farm, and the Hermiston Potato Field Day hosted by Oregon State University (OSU) at the Hermiston Agricultural Research and Extension Center (HAREC). Both events are long-running fixtures on the potato research calendar, and both offer a level of extension investment and grower access that is well worth the drive for anyone working in Alberta's potato industry.

Washington State University: Commercial Seed Lot Trial and Field Day

WSU's Potato Field Day at Othello centers on the Commercial Seed Lot Trial, a program that has run in cooperation with the Washington State Potato Commission for more than six decades. Each year, WSU collects seed samples from commercial growers and grows them out under controlled conditions for roughly 70 days, giving growers, seed suppliers, and handlers a side-by-side comparison of the seed lots moving through the supply chain. Trained readers evaluate every lot for disease, virus, herbicide injury, frost damage, and seed-piece handling issues before the results are published, giving the industry both a quality-control tool and a historical benchmark for how varieties are performing year over year.

What stood out most to me was the scale of collaboration behind the trial. Plant disease specialists from across the Northwest, including certification staff from Washington, Montana, and Oregon, take part in the readings and cross-check each other's diagnoses before results are finalized. WSU also runs a virus and disease reading training session ahead of the first field reading, which improves accuracy across the whole reading team, novice and expert alike. The field day itself is split into concurrent tours covering cultural practices on one side and pests and diseases on the other, so growers can move between sessions based on what matters most to their own operation.

Showcase of OSU's most promising new varieties

WSU's 3 Tiered Commercial Seed Lot Trial

AG RELATIONS DIRECTOR – Ashley Wagenaar

Hermiston, Oregon: HAREC Potato Field Day

The following stop was Oregon State University's Hermiston Agricultural Research and Extension Center, where the annual Potato Field Day brings together growers, agronomists, students, and researchers from across the Columbia Basin. This year's program covered OSU's potato breeding and variety development pipeline, genetics and genomics work aimed at speeding up new variety releases, nematode management research, soil health measurement in irrigated potato ground, and updates from HAREC's plant pathology and entomology programs, including current work on lygus bug and Colorado potato beetle management.

A theme that came through clearly at Hermiston is just how long the road is from cross to commercial release. Breeding a new potato variety can take up to a dozen years, and OSU's breeders were candid about needing grower feedback after release to help fine-tune how a new variety performs on real farms. That kind of open dialogue between researchers and growers, in the field, in real time, is exactly the sort of extension relationship our industry should be paying attention to.

WSU's Seed Size Trial

Alex Karasev Presenting on Strains of Potato Virus Y

Why This Matters for Alberta

Neither WSU nor OSU runs these programs for their own benefit. Both universities treat extension, the transfer of research findings directly to growers, as a core part of their mandate, and it shows in the resources committed to these field days: research farms and staff time, disease reading training, published seed lot results, and free access for anyone in the industry who wants to attend. That investment produces real value that extends well beyond Washington and Oregon. Alberta growers rely on many of the same seed sources, face many of the same pests and diseases, and grow many of the same varieties moving through these trials.

Staying current on what WSU and OSU are finding, whether it is a new virus concern flagged in the seed lot trial, a promising variety strain still years from release, or a new approach to managing nematodes or soil health, gives us an early look at emerging challenges, and a head start on the varieties and practices that might eventually help our own industry. Field days like these are also a chance to build relationships with researchers and extension specialists directly, which makes it easier to ask questions and get answers when something unusual turns up in an Alberta field.

I would encourage anyone in the Alberta potato industry with the opportunity to attend one of these field days to do so. Both events are held annually in late June, so with some planning it is possible to catch both on a single trip south, as I did this year.

Provincial News

RDAR Round-Up 2026

On June 17, over 350 producers, industry leaders, and researchers turned out for a full day of learning and networking. From engaging discussions to live demonstrations, the energy throughout the day highlighted the strength and innovation driving Alberta agriculture forward.

The Final Mile™ Tent highlighted OFCAF's offerings, including securing funding, farmers' virtual fencing experiences, and drone seeding demonstrations.

Agriculture Labour Task Force Grant Program Accepting Applications

In 2022, the Government of Alberta invested \$2.5 million in Ag for Life's Agriculture Labour Task Force Grant Program to help producers and processors attract, hire and retain employees.

Ag for Life, a charitable organization, will distribute grants to address labour shortages caused by job vacancies that cannot be filled and an aging workforce.

"Alberta's government is committed to strengthening and growing a resilient and competitive agriculture sector that supports jobs and long-term food security. Ag producers and processors need a stable, skilled workforce and Ag for Life's Agriculture Labour Task Force Grant Program helps them meet those labour challenges so they can continue producing the food we rely on," said Minister of Agriculture and Irrigation Tara Sawyer.

Alison & Michael Davie Named 2026 Alberta Regional Winners of Canada's Outstanding Young Farmers Program

Canada's Outstanding Young Farmers (COYF) has named Alison and Michael Davie of North Paddock Farms Ltd. as the 2026 Alberta Regional Honourees. COYF is an annual program dedicated to recognizing farmers under the age of 40 who exemplify professional excellence in the agricultural industry. The national winner of COYF 2026 will be selected during the national competition in Vancouver, BC, held from November 25–29, 2026.

Congratulations & good luck in the finals!

Supporting Farmers' Mental Health

Farm Credit Canada and the Canadian Centre for Agricultural Wellbeing recently announced a renewed partnership to sustain and expand the National Farmer Wellness Network Crisis Line, 1-866-FARMS01 (1-866-327-6701). Since launching in February 2025, the National Farmer Wellness Network Crisis Line has connected agricultural workers across Canada with licensed mental health professionals trained through the Canadian Agricultural Literacy Program, specialists who understand the unique pressures of farming life. The renewal ensures that this vital service continues uninterrupted.

Fruit and Vegetable Growers of Canada Recognized as One of the Most Active Lobbying Organizations

This past June, the Fruit and Vegetable Growers of Canada (FVGC) was recognized as one of Canada's most active lobbying organizations, with 20 meetings focused on CUSMA. The Canadian Produce Council (CPC) was pleased to participate in at least six of these meetings, working alongside FVGC to advance the interests of Canada's fresh produce sector. This advocacy work also received national attention when Erik Nielsen, FVGC's Director of Government Relations, was interviewed by The Hill Times, a leading Ottawa publication widely read by government decision-makers. The coverage highlights the strength of FVGC's advocacy efforts and helps raise the profile of the industry's priorities.

PGA GROWER PROFILE

Hoogland Farms Ltd.

Family Composition: 3rd Generation Seed Potato Farmer

Location: Millet, AB

Crops Produced: Seed Potatoes

1. How did you get into potato farming?

Grandpa started in seed potatoes in the '50s, then my dad took the farm over from him. During my agricultural school in Holland, I started helping on the farm any time that I had. Sometimes I should have been at school, maybe, but farming was more fun 😊. Then, in 1996, I came to work for a season on a potato farm in Stony Plain. After liking it here, I went to a different potato farm the year after, also in the Edmonton area, and in 1998 we immigrated and grew our first potato crop in 1999.

2. What do you love about potato farming?

The potato community and diversity of the different varieties. I'm passionate about looking for and finding new varieties for the future. Therefore, I go every year to the Netherlands for the Variety Days, where all breeders from Europe display their new and upcoming varieties.

3. How long have you been growing potatoes?

I have been growing seed potatoes since we moved from Holland in 1998. Our family grew seed potatoes before that, since 1954.

4. What other activities are you involved in (outside the farm or association work)?

Outside of the farm, me and my family race go-karts on summer weekends, and I enjoy speed skating and skiing in the winter months.

5. What types of on-farm sustainability practices do you employ?

We strive to try to get better yield and quality to grow fewer acres and the same amount of volume. Using long rotation and working with neighbours on land swapping, and looking for and trying new varieties that use fewer inputs and are stronger during weather events like drought while maintaining yields and quality. We are dryland farming, but I'm trying to get a portion of our farm under irrigation, which is not easy, but I hope to be able to irrigate 25–30% of our potato acres in 2027..

6. What do you contribute to tell your "story" of agriculture to the public?

We regularly host school groups to educate the next generation. And trying every year to put a summary on YouTube video of the last season. Also, we supply neighbours with seed potatoes for their gardens to educate them on the importance of clean seed vs. keeping growing your own smalls from the garden.

7. What is the best farming advice you've been given?

"Quality over quantity," like "happy wife (customer), happy life." Don't grow more than you can handle.

8. What are your concerns for the future of farming?

The higher cost of inputs is a big concern to me for the possible next generation. With the cost of equipment and inputs going up, the margins are getting very small, making it tough and less attractive for the next generation to carry on.

9. What excites you about the future of farming?

Seeing the young generation getting into potato farming. Every PGA annual meeting, I'm amazed by all the young people in our potato group in Alberta. It's something I don't see in a lot of the other farming groups.

Also, our Edmonton potato growers group is very young. When I came in 1998, I was the young guy. Now I am almost the oldest. That's pretty cool, to be working with the young guys.

Jan, Pieter & Jake Hoogland

Submitted by Jake Hoogland

We are looking for a North Grower to join Public Awareness Committee!

Are you passionate about the potato industry and eager to make a difference? We're looking for a North Grower who brings fresh ideas, enthusiasm, and a desire to help promote and strengthen our industry.

If you're ready to have a voice, share your ideas, and help shape the future of public awareness for Alberta potatoes, we'd love to hear from you!

Reach out via e-mail pgacommunications@albertapotatoes.ca or call us at 403-223-2262

Short-term Manure Management for Alberta Potato Growers

Manure management in Alberta is regulated under the Agricultural Operation Practices Act (AOPA) and administered by the Natural Resources Conservation Board (NRCB). AOPA sets out minimum legislative requirements for short-term manure storage stockpiling, and the subsequent spreading of manure for land application.

Who does AOPA applies to?

AOPA applies to anyone or any operation that produces, stores, transports, receives, and applies manure, organic materials, and compost. This includes crop producers using manure, organic materials, and compost as fertilizer.

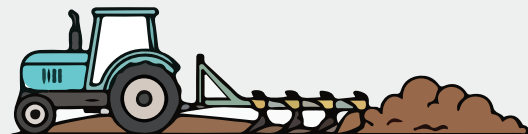

Short-term manure storage

AOPA requires operators that use short-term manure storage to store solid manure for only seven months over a three-year period. For example, if you store in early November and spread in late May (seven months), you must not use that spot again for another two years.

AOPA also sets minimum setback distances for manure stockpiles.

For more information, check out the following NRCB and Government of Alberta fact sheets:

- [Short-Term Solid Manure Storage Requirements](#)
- [Minimum Setbacks for Land Application](#)

Help Shape How AFSC Connects With Alberta's Agri Community

AFSC is seeking to better understand how producers and agribusinesses prefer to receive information, stay informed and learn about programs and services through an anonymous survey. Responses will help AFSC make more thoughtful decisions about how they communicate and where they focus their efforts. AFSC values your time and input and appreciate you being part of their community.

THE POTATO MINUTE

MEMBERSHIP

The Alberta Potato Industry Association is composed of individuals from various areas of business, all of whom work with, and alongside, the potato growers in Alberta. Formed in 1990, the APIA facilitates in the networking with growers at events such as the Burgers N Beans, the Alberta Potato Conference Trade Show, and the Annual PGA Golf Tournament. We are very excited to be celebrating 35 years of partnership with the growers this year!

If you are interested in becoming a member, please send an email to apiamemberships@gmail.com. Memberships will be sent out at the end of the year to last years' members, as well as those interested this year.
